

Summary

Computer Science student specializing in AI/ML with experience in full stack development. A highly motivated student with strong technical, communication and presentation skills who is ready to implement his learnings and skills to real life problems. Has experience in building accessible and user centric applications.

Skills

Programming: Python, C++, SQL, Java (basics)
Web Development: React, Django, Flask, REST APIs
AI/ML: TensorFlow, PyTorch, scikit-learn, OpenCV, NLTK
Cloud & DevOps: Azure, Docker, Git, CI/CD Pipelines
Databases: MySQL, PostgreSQL, MongoDB
Methodologies: Agile, SDLC, CI/CD
Soft Skills: Collaboration, Leadership, Adaptability

Experience & Leadership

GenAI Solution Developer Intern, ROVA (Botter Solutions Pvt Ltd) May 2025 – July 2025
Engineered vision-parsing pipelines (LLaMA Parse, YOLOv11/v8, TATR, etc) following SDLC methodology, collaborated cross-functionally to deploy production solutions, reducing manual document processing overhead by 40%
Microsoft Learn Student Ambassador (Beta) Jan 2024 – Present
Delivered 3 Azure/AI workshops to 150+ students (92% satisfaction), Azure cloud services, cloud deployment fundamentals
General Secretary, Hindi Club Jul 2024 – Present
Automated UTR verification & QR systems reducing processing time by 70% across 1,500+ transactions and 1000+ attendees
Student Coordinator, SPACEVITA Oct 2024
Led event coordination for a 300+ attendee university event featuring the Former ISRO Director, documentary.

Projects

ElderAI – Intelligent Memory Companion | Full-Stack AI System 
Next.js 15, React 19, Supabase, Gemini, Groq, Jitsi SDK July 2025 – Present
• Built AI elderly-care platform enabling multimodal memory capture(text, voice, images) with conversational retrieval for elderly/Alzheimer's patients; Implemented real-time collaboration with 5+ elders/other users using Next.js, Supabase, etc.
Document Approval System | Software Development 
React, CSS, Firebase, SDLC June 2025 – July 2025
• Built a platform to streamline the university's document approval process by enabling online submission, tracking, and feedback. Deployed on Firebase with CI/CD pipeline, reduced approval cycle time from 3 days to under 4 hours.
VITAL-AI | Full-Stack Web App 
Machine Learning, Python, React, TensorFlow, Flask Feb 2025 - Mar 2025
• Developed a comprehensive platform during a HackByte 3.0 at IIITDM Jabalpur that combines daily health monitoring (Google Fit sync, water and fasting trackers) with real-time disease risk prediction using Random Forest models.
• Designed intuitive UI dashboards, Built RESTful microservices using Flask with PostgreSQL backend, flag risks, and recommend doctor visits based on combined vitals and diagnostic results.
Advanced Parkinson's Detection via Speech Analysis | Artificial Intelligence 
LSTM Neural Networks, Python, GRUs, GAN Jan 2025 - Feb 2025
• Engineered a Bi-LSTM model to detect early Parkinson's disease from speech, achieving 93% average accuracy with strong F1-score and precision on benchmarked datasets(from UCI repository).
• Research paper and results submitted to *Elsevier's AI in Medicine* journal (Scopus indexed) for publication. 

Achievements & Competitions

Competitive Programming

- CodeChef: **1599-rated** with consistent monthly contest participation. 
- LeetCode: Solved **450+ problems** across DSA domains(Arrays, Binary Search, Trees, Graphs). 
- Strong foundation in algorithms and problem-solving.

Hackathons & Competitions

- Bank of Baroda Hackathon: **Top 20** among 5k+ people with AI Financial Advisory solution.
- Canara SuRaksha Cyber Hackathon: **Top 1%-** Won 25,000 prize, building financial security application.
- ACWOC25 (Open Source): **3rd place** among 600+ participants for code quality and innovation.

Certifications

Applied ML in Python (University of Michigan) 
Google IT Support Certificate 

Azure AI Document Intelligence Solution 
Oracle Cloud 2025 Certified AI Foundations Associate
